A Questionnaire on Survey of Problems in Teachers Marital Life using Data Mining

Dr. Pranav Patil

Assistant Professor, Department of Computer Science, M. J. College, Jalgaon, Maharashtra, India

Abstract: Marital life is much necessary for person but still there are some limitations. There are many problems and limitations in the marital life. We conduct an online survey and present many problems to the Teachers marital life through a questionnaire. We use the data mining for get ready the result after done survey. Through the use of automated statistical study or data mining techniques, businesses are determined new trends and patterns of behavior that previously went unseen. It can be used in a predictive manner for a multiplicity of applications. We will give some solutions after survey on problems in marital life using the data mining. We create a questionnaire which highlights the many problems, which are related to his marital life.

Keywords: Data mining, Marital life, Satisfaction, Person, Statistical analysis.

1. INTRODUCTION

A survey on Teachers marital life wants to collect the view of people by a questionnaire. It also shows the various positive and negative effects of marital life. Marriage is like a family of persons with the manager as the head. Person develops a sense of friendship and fellow feeling with life partner. Persons learn the value of discipline in his life. It teaches them a sense of responsibility in matters of taking care of behavior, earning source and health. Persons do all the works with their own hands, thus becoming self-dependent. While it is equally important to find time for using a family and Children, friends circle, health club, behavior of society and getting trained to improve their skills and achieve wholesome development. It has both positive and negative aspects. A person residing in marriage studies with full focus and gets help   from the fellow or new persons. You have to face when you enter the marital life to share your family. I hope you never had shared your life with anyone; this change would be quite difficult to you. Your life partner may hail from a joint family and never tried to keep a private environment in the life. But there are many problems that are faced to the marital life. We conduct an online survey and present many problems to the marital life through a questionnaire .This method of data collection is quite popular, particularly in case of big inquires. It is life form adopted by private individuals, research workers, private and public organization. This study has conducted among 500 nurses by using questionnaire, which includes Teachers in Jalgaon district marital satisfaction scale.

2. Factor Categories

This form considers all the factors moving of married life and most likely of these factors are taken in step with their appropriate priority. It includes major factors and everyone these factors are taken as queries which may be answered in 5 alternative ways (Very satisfied, Satisfied, Neutral, dissatisfied, very dissatisfied) consistent with that satisfaction of married life will be measured.

3. Objectives:-

The main purposes of this study are:

- To find out the problems in marital life.
- Good interaction should be there between Husband/Wife and family
- Provide a effective environment for marital life
- To establish guidelines for its general improvement

4. Classifiers:-

Give to the factors in the Questionnaire the respondents can be classified in broad three classifiers, these are following.

a) Husband/Wife
b) Family
c) Management
d) Health

5. RESULTS AND DISCUSSION

▪ **Daily Marital Satisfaction:**

Teachers are hard-working. Their knowledge and confidence are normal. There is change in behavior and nature day by day. Their freedom in living is good but tries to avoid responsibility. They try to adjust situation but entertainment is self oriented. To take care of each other is temporarily but they cannot spend time with each other as per requirement. The companies of life partner create less happiness.
